SIGNET COMPLETES BANGOR INTERNATIONAL AIRPORT'S ACCESS-CONTROL SYSTEM

NORWELL, MA – December 5, 2007 – SIGNET Electronic Systems, Inc., Scarborough, ME office, has completed the installation of an access-control system on all the secure doorways at Bangor International Airport.

SIGNET recently completed the year-long project of installing a smart-card system on 80 doors in the international and domestic terminals. The system combines smart-card and biometric technology to protect against unauthorized entrance.

“This state-of-the-art access control system will serve to protect the passengers and employees at Bangor International Airport by restricting access to sensitive areas of the facility,” said Bradford Caron, Executive Vice President of SIGNET, the largest privately held communications, security and safety systems solution provider in New England with offices in Maine, Massachusetts and Rhode Island. “The SIGNET team managed a complicated project that required maintaining the old access system and ensuring security at every door, all while installing the new system.”

The \$500,000 project allows airport officials to control employee and subcontractor movement around the airport by programming the system to allow or deny access depending on whether an individual is authorized to enter a particular area and at a particular time of the day.
