

## FOR IMMEDIATE RELEASE

### SIGNET FINE TUNES WOBURN HIGH SCHOOL SECURITY SYSTEM

**NORWELL – April 23, 2008** – SIGNET Electronic Systems, Inc. has completed programming and modifications to the security system at Woburn Memorial High School, integrating video, intercom and door-locking systems to better protect the students, staff and property. The Internet Protocol-based system features security cameras linked to intercoms, pre-programmed locking doors and a dynamic intrusion alarm system.

“SIGNET was able to reconfigure the existing security equipment at Woburn Memorial High School to help the staff maximize its features and potential in securing the property and the people at the school,” said Bradford Caron, Executive Vice President of SIGNET Electronic Systems, Inc. “Integrating the various features so they work together gives the staff powerful tools to secure the premises and keep everyone safe.”

The Woburn Public Schools contracted with SIGNET, a pre-qualified vendor for the Commonwealth of Massachusetts and its municipalities, earlier this year to increase the functionality of the security system. The largest privately held communications, security and life safety systems solutions provider in New England, SIGNET has extensive experience with installations and systems integration in public buildings, including schools, municipal offices and police and court facilities.

The scope of the project at Woburn Memorial High School included:

- Configuring the intrusion system to allow school staff to arm and disarm different areas of the school based upon facility use and needs.
- Modifying the automatic door locking schedule based on the building schedule and testing all doors for proper functionality.
- Integrated the security camera system with the building intercom, which allows school staff to view an individual outside the school requesting entrance through a locked door.
- Integration of security cameras with the access control system.
- Training school staff on full use of the systems.
